# INTRODUCTION SCOPE OF THIS MANUAL

This manual is intended for use by experienced technicians familiar with similar types of commercial grade communications equipment. It contains all required service information for the equipment and is current as of the publication date. Changes which may occur after publication are covered by either Service Bulletins or Manual Revisions. These are issued as required.

#### ORDERING REPLACEMENT PARTS

When ordering replacement parts or equipment information, the full part identification number should be included. This applies to all parts, components, kits, or chassis. If the part number is not known, include the chassis or kit number of which it is a part, and a sufficient description of the required component for proper identification.

Unit Model & destination		TX-RX Unit	Frequency range	Remarks
TK 3160	K M	X57-6730-10	450~490MHz	IF1: 49.95MHz
TK-5100 K,IVI		X37-0730-10	430~470101112	LOC: 50.4MHz

#### PERSONAL SAFETY

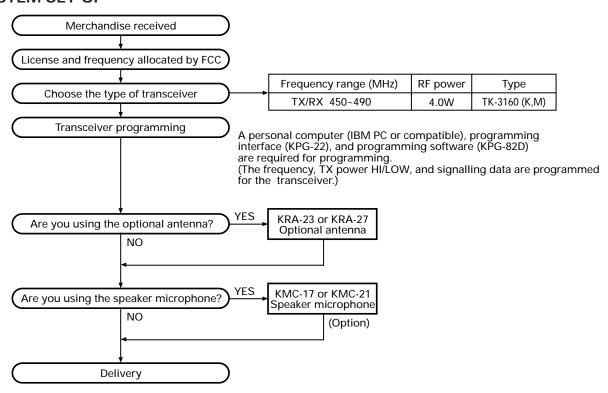

The following precautions are recommended for personal safety:

- DO NOT transmit until all RF connectors are verified secure and any open connectors are properly terminated.
- SHUT OFF and DO NOT operate this equipment near electrical blasting caps or in an explosive atmosphere.
- This equipment should be serviced by a qualified technician only.

#### **SERVICE**

This radio is designed for easy servicing. Refer to the schematic diagrams, printed circuit board views, and alignment procedures contained within.

#### SYSTEM SET-UP

### **OPERATING FEATURES**

# 1. Operation Features Installing the (Optional) Antenna

Screw the antenna into the connector on the top of the transceiver by holding the antenna at its base and turning it clockwise until secure.

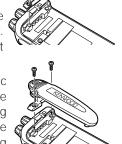

#### Installing the Belt Clip

**Note:** When first installing the belt clip, you must remove the battery pack from the rear of the transceiver.

- 1 Remove the two screws from the rear of the transceiver, then remove the small, plastic black covering that was held in place.
- 2 Insert the belt clip mount into the space on the rear of the transceiver.
- 3 Using the 2 screws, affix the belt clip in place.

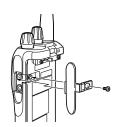

Note: Do not dispose of the plastic black covering! If you remove the belt clip, replace the covering into the space on the rear of the transceiver. Either this covering or the belt clip must be in place, otherwise the battery pack may not remain installed properly.

# Installing the Cover over the Speaker/ Microphone Jacks

**Note:** When installing the speaker/ microphone jack cover, you must remove the battery pack from the rear of the transceiver.

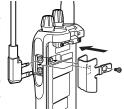

If you are not using a speaker/microphone, install the cover over the speaker/microphone jacks using the supplied screw.

**Note:** To lift the cover after it has been installed, use a piece of hardened plastic or metal, such as a small screwdriver. Lift the cover by its tab, beside the screwhole, taking care not to damage the cover.

#### Installing the (Optional) Speaker/ Microphone

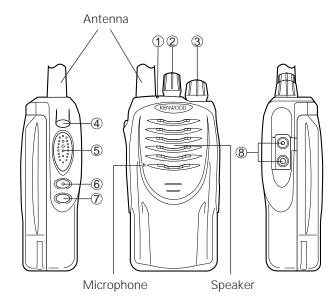

**Note:** When installing the optional speaker/ microphone and its locking bracket, you must remove the battery pack from the rear of the transceiver.

- 1 Insert the speaker/ microphone plugs into the speaker/ microphone jacks.
- 2 Attach the locking bracket using the supplied screw.

**Note:** To lift the locking bracket after it has been installed, use a piece of hardened plastic or metal, such as a small screwdriver. Lift the bracket by its tab, beside the screwhole, taking care not to damage the bracket.

#### **GETTING ACQUAINTED**

The transceiver is shown with the optional KNB-24L battery pack.

#### 1 LED indicator

Lights red while transmitting. Lights green while receiving. Flashes orange while receiving a 2-Tone, DTMF, or FleetSync signal that matches the one set up in your transceiver. If programmed by your dealer, flashes red when the battery power is low while transmitting.

#### 2 Channel Switch

Rotate to select a channel from 1 to 16.

#### ③ Power switch/ Volume control

Turn clockwise to switch ON the transceiver. Rotate to adjust the volume. To switch OFF the transceiver, turn counterclockwise fully.

#### 4 AUX key

This is a PF (Programmable Function) key. Press it to activate its auxiliary function (page 4). The default setting for this key is None.

#### 5 PTT (Push-to-Talk) switch

Press this switch, then speak into the microphone to call a station.

#### 6 Side 1 key

This is a PF (Programmable Function) key. Press it to activate its auxiliary function (page 4). The default setting for this key is None.

#### 7 Side 2 key

This is a PF (Programmable Function) key. Press it to activate its auxiliary function (page 4). The default setting for this key is Squelch Off Momentary. Press each key to activate its auxiliary function.

#### **8 SP/MIC jacks**

Connect an optional speaker/ microphone here.

### **OPERATING FEATURES / REALIGNMENT**

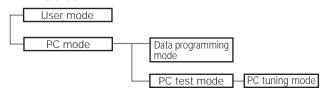

#### **Programmable Auxiliary Functions**

The **AUX**, **Side 1**, and **Side 2** keys can be programmed with the auxiliary functions listed below:

- · 2-Tone Encode
- Emergency \*1
- Monitor Momentary
- Monitor Toggle
- None
- RF Power Low
- Scan
- · Scan Temporary Delete
- Scrambler
- · Squelch Off Momentary
- · Squelch Off Toggle
- \*1 This function can be programmed only on the AUX key.

#### REALIGNMENT

#### 1. Modes

Mode	Function
User mode	For normal use.
PC mode	Used for communication between the
	radio and PC (IBM compatible).
Data programming	Used to read and write frequency data
mode	and other features to and from the radio.
PC test mode	Used to check the radio using the PC.
	This feature is included in the KPG-
	82D.

#### 2. How to Enter Each Mode

Mode	Operation
User mode	Power ON
PC mode	Received commands from PC

#### 3.PC Mode

#### 3-1. Preface

The TK-3160 transceiver is programmed using a personal computer, a programming interface (KPG-22) and programming software (KPG-82D).

The programming software can be used with an IBM PC or compatible. Figure 1 shows the setup of an IBM PC for programming.

#### 3-2. Connection procedure

- Connect the TK-3160 to the personal computer with the interface cable.
- 2. When the POWER is switched on, user mode can be entered immediately. When the PC sends a command, the radio enters PC mode.

When data is transmitting from the transceiver, the red LED lights.

When data is received by the transceiver, the green LED lights.

#### Notes:

- The data stored in the personal computer must match the model type when it is written into the EEPROM.
- Change the TK-3160 to PC mode, then attach the interface cable.

### 3-3. KPG-22 description (PC programming interface cable: Option)

The KPG-22 is required to interface the TK-3160 with the computer. It has a circuit in its D-subconnector (25-pin) case that converts the RS-232C logic level to the TTL level.

The KPG-22 connects the SP/MIC connector of the TK-3160 to the computer's RS-232C serial port.

#### 3-4. Programming software description

KPG-82D is the programming software for TK-3160 supplied on a CD-ROM. This software runs under Windows 98, ME, Windows 2000 or XP on an IBM-PC or compatible machine.

The data can be input to or read from TK-3160 and edited on the screen. The programmed or edited data can be printed out. It is also possible to tune the transceiver.

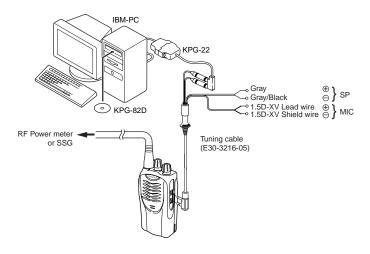

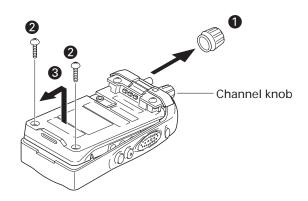

Fig. 1

### **DISASSEMBLY FOR REPAIR**

#### 1. Separating the case assembly from the chassis.

- 1. Remove the volume knob 1.
- 2. Remove the two screws 2.
- 3. Lift the chassis **3**, and remove it from the case assembly. **Note:** After separating the case assembly from the chassis, remove the channel knob.

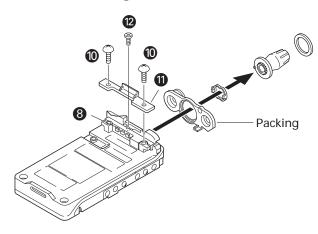

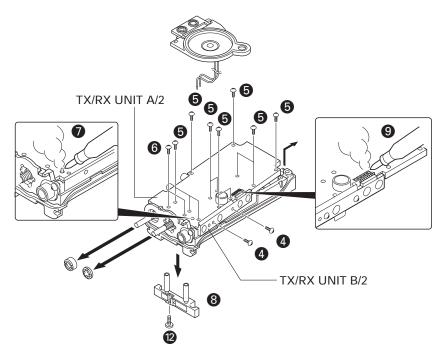

#### 2. Separating the chassis from the TX/RX unit.

- 1. Remove the two screws 4 fixing the TX/RX unit B/2.
- 2. Remove the twelve screws **5** and two screws **6** fixing the TX/RX unit A/2.
- 3. Remove the solder from the antenna terminal using a soldering iron 7, then lift the unit off.

- 1. Remove the two screws **10**, then pull out the back cover **10**.
- 2. Remove the screw 2.

Note: To remove the TX/RX unit B/2, remove the solder using

a soldering iron **9**.

Note: The two screws 6 of TX/RX unit A/2 are fixing the

battery terminal block 8.

### **DISASSEMBLY FOR REPAIR**

#### **Assembling**

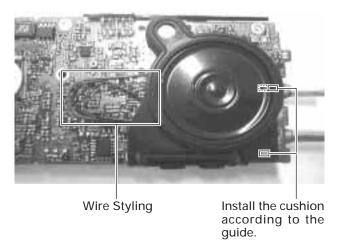

Installation of battery terminal block and packing

Install them so that no distortion or deformation occurs.

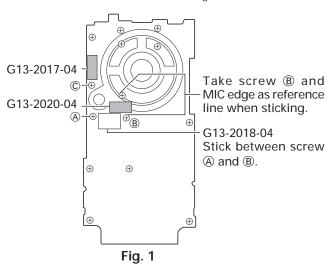

Installation of speakers and cushion, and wire styling of speakers

Install the speakers so that they do not protrude from the cushion. Perform the wire styling of speakers as shown in a photograph.

#### Attaching the cushion

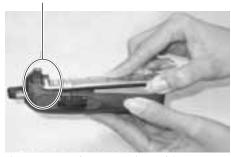

Attach the cushion as shown in Fig. 1.

**Note:** Cushion must not cover the screws (A), (B) and (C).

#### · Installation of chassis and cabinet assy

Do not press this area, top packing easily deform.

First, mount the set to the cabinet assy.

Second, press down the Chassis to the cabinet assy as shown in the diagram.

#### **Good Condition**

After mount, packing should be in this condition.

#### NG Condition

Packing deform.

#### Packing protruded out.

#### Note:

- Take care that the packing does not protrude from the chassis or case.
- Replace the protruded or deformed packing with a new one.

### CIRCUIT DESCRIPTION

#### 1. Frequency Configuration

The receiver utilizes double conversion. The first IF is 49.95 MHz and the second IF is 450 kHz. The first local oscillator signal is supplied from the PLL circuit.

The PLL circuit in the transmitter generates the necessary frequencies. Fig. 1 shows the frequencies.

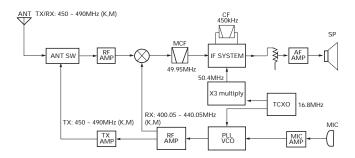

Fig. 1 Frequency configuration

#### 2. Receiver

The frequency configuration of the receiver is shown in Fig. 2.

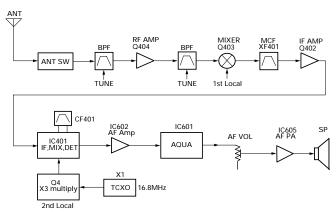

Fig. 2 Receiver section

#### 1) Front End (RF AMP)

The signal coming from the antenna passes through the transmit/receive switching diode circuit, (D204,D206,D208 and D212) passes through a BPF (L413 and L414), and is amplified by the RF amplifier (Q404).

The resulting signal passes through a BPF (L409,L408 and 407) and goes to the mixer. These BPFs are adjusted by variable capacitors (D402,D403,D404,D405 and D406). The input voltage to the variable capacitor is regulated by voltage output from the microprocessor (IC805).

#### 2) First Mixer

The signal from the front end is mixed with the first local oscillator signal generated in the PLL circuit by Q403 to produce a first IF frequency of 49.95 MHz.

The resulting signal passes through the XF401 MCF to cut the adjacent spurious and provide the opitimun characteristics, such as adjacent frequency selectivity.

#### 3) IF Amplifier Circuit

The first IF signal is passed through a four-pole monolithic crystal filter (XF401) to remove the adjacent channel signal. The filtered first IF signal is amplified by the first IF amplifier (Q202) and then applied to the IF system IC (IC401). The IF system IC provides a second mixer, second local oscillator, limiting amplifier, quadrature detector and RSSI (Received Signal Strength Indicator). The second mixer mixes the first IF signal with the 50.4MHz of the second local oscillator output (TCXO X1) and produces the second IF signal of 450kHz.

The second IF signal is passed through the ceramic filter (CF401) to remove the adjacent channel signal. The filtered second IF signal is amplified by the limiting amplifier and demodulated by the quadrature detector with the ceramic discriminator (CD401). The demodulated signal is routed to the audio circuit.

#### 4) Wide/Narrow Switching Circuit

Narrow and Wide settings can be made for each channel by switching the demodulation level.

The WIDE (high level) and NARROW (low level) data is output from IC805, pin 54.

When a WIDE (high level) data is received, Q401 turn off. When a NARROW (low level) data is received, Q401 turn on. Q401 turns off/on with the Wide/Narrow data and the IC401 detector output level is switched to maintain a constant output level during wide or narrow signals.

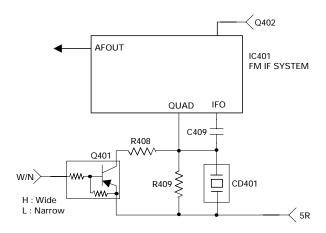

Fig. 3 Wide/Narrow switching circuit

#### 5) Audio Amplifier Circuit

The demodulated signal from IC401 is amplified by IC602, and goes to AF amplifier through IC601.

The signal then goes through an AF volume control (VR801), and is routed to an audio power amplifier (IC605) where it is amplified and output to the speaker.

### CIRCUIT DESCRIPTION

#### 6) Tone Volume Fixed Circuit

This function generates a TONE signal sound even if the AF volume of the transceiver is the minimum.

A TONE signal is sent through Q602 to the AF amplifier when, in the FPU, "TONE Volume Fixed" is set to ON.

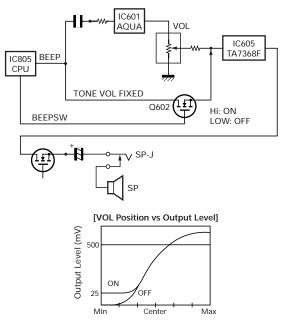

Fig. 4 Tone volume fixed circuit

#### 7) Squelch

Part of the AF signal from the IC enters the FM IC (IC401) again, and the noise component is amplified and rectified by a filter and an amplifier to produce a DC voltage corresponding to the noise level.

The DC signal from the FM IC goes to the analog port of the microprocessor (IC805). IC805 determines whether to output sounds from the speaker by checking whether the input voltage is higher or lower than the preset value.

To output sounds from the speaker, IC805 sends a high signal to the SP MUTE line and turns IC605 on through Q603,Q604,Q607 and Q608. (See Fig. 5)

#### 8) Receive Signalling

#### (1) QT/DQT

The output signal from IF IC (IC401) enters the microprocessor (IC805) through IC601. IC805 determines whether the QT or DQT matches the preset value, and controls the SP MUTE and the speaker output sounds according to the squelch results.

#### (2) 2-TONE

Part of the received AF signal output from the AF amplifier IC602, and then pass through an audio processor (IC601), goes to the other AF amplifier IC603, is compared, and then goes to IC805. IC805 checks whether 2-TONE data is necessary. If it matches, IC805 carries out a specified operation, such as turning the speaker on. (See Fig. 5)

#### (3) MSK (Fleet Sync)

Fleet Sync utilizes 1200bps and 2400bps MSK signal is output from pin 6 of IC601. And is routed to the VCO. When encoding MSK, the microphone input signal is muted.

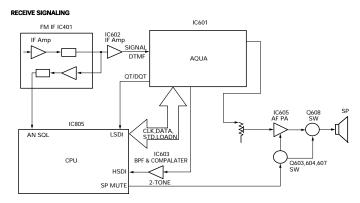

Fig. 5 AF amplifier and squelch

#### (4) DTMF

The DTMF input signal from the IF IC (IC401) is amplified by IC602 and goes to IC601, the DTMF decoder. The decoded information is then processed by the CPU.

#### 3. PLL Frequency Synthesizer

The PLL circuit generates the first local oscillator signal for reception and the RF signal for transmission.

#### 1) PLL

The frequency step of the PLL circuit is 5 or 6.25kHz.

A 16.8MHz reference an oscillator signal is divided at IC1 by a fixed counter to produce oscillator (VCO) output signal which is buffer amplified by Q9 then divided in IC1 by a dual-module programmable counter. The divided signal is compared in phase with the 5 or 6.25kHz reference signal from the phase comparator in IC1. The output signal from the phase comparator is filtered through a low-pass filter and passed to the VCO to control the oscillator frequency.(See Fig. 6)

#### 2) VCO

The operating frequency is generated by Q6 in transmit mode and Q5 in receive mode. The oscillator frequency is controlled by applying the VCO control voltage, obtained from the phase comparator, to the varactor diodes (D4 and D7 in transmit mode and D3 and D9 in receive mode). The RX pin is set high in receive mode causing Q8 and Q12 to turn Q6 off and turn Q5 on.

The TX pin is set high in transmit mode. The outputs from Q5 and Q6 are amplified by Q9 and sent to the RF amplifiers.

### CIRCUIT DESCRIPTION

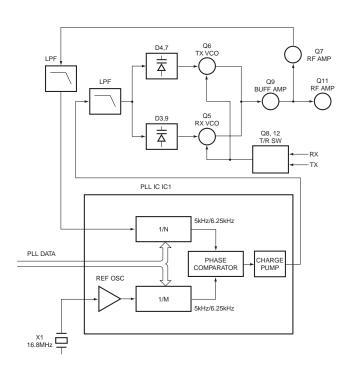

Fig. 6 PLL circuit

#### 3) Unlock Detector

If a pulse signal appears at the LD pin of IC1, an unlock condition occurs, and the DC voltage obtained from C19, R6, and Q1 causes the voltage applied to the microprocessor to go high. When the microprocessor detects this condition, the transmitter is disabled, ignoring the push-to-talk switch input signal.(See Fig. 7)

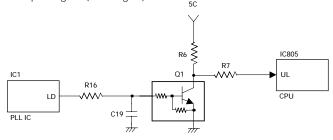

Fig. 7 Unlock detector circuit

#### 4. Transmitter System

#### 1) Microphone Amplifier

The signal from the microphone passes through IC601. When encoding DTMF, it is turned OFF for muting the microphone input signal by IC601.

The signal passes through the Audio processor (IC601) for the maximum deviation adjustment, and goes to the VCXO modulation input.

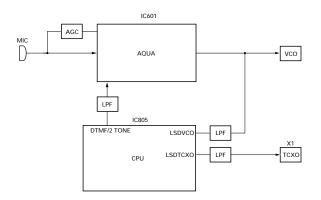

Fig. 8 Microphone amplifier

#### 2) Drive and Final Amplifier

The signal from the T/R switch (D201 is on) is amplified by the pre-drive (Q206) and drive amplifier (Q207) to 50mW. The output of the drive amplifier is amplified by the RF power amplifier (Q211) to 4.0W (1W when the power is low). The RF power amplifier consists of two MOS FET stages. The output of the RF power amplifier is then passed through the harmonic filter (LPF) and antenna switch (D204 and D206) and applied to the antenna terminal.

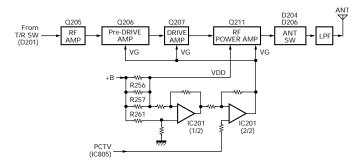

Fig. 9 Drive and final amplifier and APC circuit

#### 3) APC Circuit

The APC circuit always monitors the current flowing through the RF power amplifier (Q211) and keeps a constant current. The voltage drop at R256, R257 and R261 is caused by the current flowing through the RF power amplifier and this voltage is applied to the differential amplifier IC201(1/2). IC201(2/2) compares the output voltage of IC201(1/2) with the reference voltage from IC805. The output of IC201(2/2) controls the VG of the RF power amplifier, Drive amplifier and Pre-Drive amplifier to make both voltages the same. The change of power high/low is carried out by the change of the reference voltage.

#### 4) Encode Signalling

(1) QT/DQT

QT,DQT data of the LSDTCXO Line is output from pin 22 of the CPU. The signal passes through a low-pass CR filter and goes to the TCXO(X1).

The QT,DQT data of the LSDVCO Line is output from pin

### CIRCUIT DESCRIPTION

20 of the CPU. The signal passes through a low pass CR filter, mixes with the audio signal, and goes to the VCO modulation input. TX deviation is adjusted by the CPU.

#### (2) DTMF/2 TONE

High-speed data is output from pin 2 of the CPU. The signal passes through a low-pass CR filter, and provides a TX and SP out tone, and is then applied to the audio processor (IC601). The signal is mixed with the audio signal and goes to the VCO.

TX deviation is adjusted by the CPU.

#### (3) MSK (Fleet Sync)

The MSK input signal from the IF IC is amplified by IC602 (1/2) and goes to pin 31 of IC 601. The signal is demodulated by MSK demodulator in IC 601. The demodulated data goes to the CPU for processing.

#### 5. Power Supply

There are 3.5V power supply for PLL circuit and five 5V power supplies for the microprocessor: 5M,5MS,5C,5R, and 5T. 5M for microprocessor is always output while the power is on. 5M is always output, but turns off when the power is turned off to prevent malfunction of the microprocessor.

5C is a common 5V and is output when SAVE is not set to  $\mathsf{OFF}.$ 

5R is 5V for reception and output during reception.

5T is 5V for transmission and output during transmission.

#### 6. Control Circuit

The control circuit consists of a microprocessor (IC805) and its peripheral circuits. It controls the TX-RX unit. IC805 mainly performs the following:

- (1) Switching between transmission and reception by the PTT signal input.
- (2) Reading system, group, frequency, and program data from the memory circuit.
- (3) Sending frequency program data to the PLL.
- (4) Controlling squelch on/off by the DC voltage from the squelch circuit.
- (5) Controlling the audio mute circuit by the decode data input.
- (6) Transmitting tone and encode data.

#### 1) Frequency Shift Circuit

The microprocessor (IC805) operates at a clock of 7.3728MHz. This oscillator has a circuit that shifts the frequency by BEAT SHIFT SW (Q810).

A beat sound may be able to be evaded from generation if "Beat Shift" is set to ON when it is generated in the internal spurious transmission modulated sound of a transceiver.

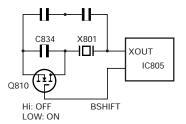

Fig. 10 Frequency shift circuit

#### 2) Memory Circuit

Memory circuit consists of the CPU (IC805) and an EEPROM (IC804). An EEPROM has a capacity of 64k bits that contains the transceiver control program for the CPU and data such as transceiver channels and operating features.

Fig. 11 Memory circuit

#### 3) Low Battery Warning

The battery voltage is checked using by the microprocessor. The transceiver generates a warning tone when it falls below the warning voltage shown in the table.

- (1) The red LED blinks when the battery voltage falls below the voltage (1) shown in the table during transmission.
- (2) The red LED blinks when the battery voltage falls below the voltage (2) shown in the table during transmission.

#### Note:

The transceiver checks the battery voltage during reception even when, in the FPU, the Battery Warning status function is set to "On TX" (default setting).

However, the LED does not blink during reception. During transmission, the LED blinks to generate the warning tone of a low battery voltage.

(3) The transceiver immediately stops transmission when the battery voltage falls below the voltage (3) shown in the table. A message tone beeps while the PTT switch is released.

	Battery Case	Li-ion Battery	Ni-Cd Battery	Ni-MH Battery
(1)	6.2[V]	6.5[V]	6.2[V]	6.2[V]
(2)	7.5[V]	7.1[V]	6.8[V]	7.0[V]
(3)	5.9[V]	6.2[V]	5.9[V]	5.9[V]

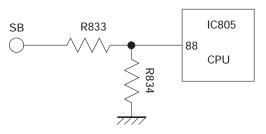

Fig. 12 Low battery warning

### **CIRCUIT DESCRIPTION / INSTALLATION**

#### 4) Battery Type Detection

The transceiver automatically detects teh battery type, measuring the resistance between the S-terminal and + terminal on the battery pack and changes the supplied voltage to the S-tarminal as below. The microprocessor then detects the battery type.

Resistor value	Battery type	Input voltage of S-terminal
1.8M <b>Ω</b>	Li-ion	0.3~1.3V
560k <b>Ω</b>	Ni-Cd	1.3~2.6V
220k <b>Ω</b>	Ni-MH	2.6~5.0V
OPEN	Battery case	0~0.3V

#### 7. Control System

Keys and channel selector circuit.

The signal from keys and channel selector input to microprocessor directly as shown in fig. 13.

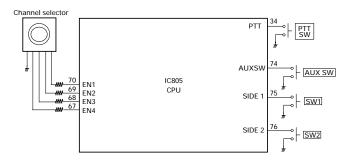

Fig. 13 Control system

#### **INSTALLATION**

#### 1. Optional Board

Remove the TX/RX unit from the radio before installing the optional board in the radio.

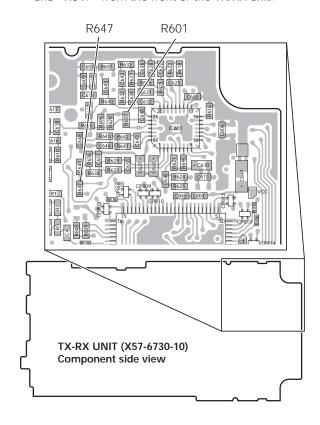

The procedure for removing the TX/RX unit is described in the DISASSEMBLY FOR REPAIR section in the Service Manual.

Install the optional board on the back of the TX/RX unit.

For details on installation of the optional board, refer to Installation Information supplied with the optional board.

When installing the optional board, also refer to the chart in TERMINAL FUNCTION section (page 12) given in the Service Manual.

**Note:** To install and use the Scrambler Board, remove "R601" and "R647" from the front of the TX/RX unit.

### **PARTS LIST**

#### **CAPACITORS**

 $\frac{\text{CC}}{1} \ \frac{45}{2} \ \frac{\text{TH}}{3} \ \frac{1\text{H}}{4} \ \frac{220}{5} \ \frac{\text{J}}{6}$ 

1 = Type ... ceramic, electrolytic, etc.

2 = Shape ... round, square, ect.

3 = Temp. coefficient

4 = Voltage rating

5 = Value

6 = Tolerance

#### · Capacitor value

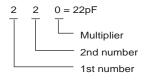

010 = 1pF

100 = 10pF

101 = 100pF

 $102 = 1000 pF = 0.001 \mu F$ 

 $103 = 0.01 \mu F$ 

#### · Temperature coefficient

1st Word	С	L	Р	R	S	Т	U
Color*	Black	Red	Orange	Yellow	Green	Blue	Violet
ppm/℃	0	-80	-150	-220	-330	-470	-750

# 2nd Word G H J K L ppm/℃ ±30 ±60 ±120 ±250 ±500

Example : CC45TH = -470 ± 60ppm/℃

#### · Tolerance (More than 10pF)

Code	С	D	G	J	K	М	Х	Z	Р	No code
(%)	± 0.25	±0.5	±2	±5	±10	±20	+ 40	+ 80	+ 100	More than $10\mu F -10 \sim +50$
							- 40	- 20	-0	Less than $4.7\mu\text{F}-10 \sim +75$

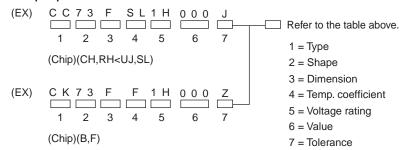

#### (Less than 10pF)

Gode	В	С	D	F	G
(pF)	±0.1	±0.25	±0.5	±1	±2

#### · Voltage rating

		_	_	_	_	_					
2nd word	A	В	C	D	E	F	G	Н	J	K	V
1st word											
0	1.0	1.25	1.6	2.0	2.5	3.15	4.0	5.0	6.3	8.0	-
1	10	12.5	16	20	25	31.5	40	50	63	80	35
2	100	125	160	200	250	315	400	500	630	800	-
3	1000	1250	1600	2000	2500	3150	4000	5000	6300	8000	-

#### · Chip capacitors

#### **Dimension (Chip capacitors)**

	. ,		
Dimension code	L	W	Т
Empty	$5.6 \pm 0.5$	$5.0 \pm 0.5$	Less than 2.0
Α	$4.5\pm0.5$	$3.2 \pm 0.4$	Less than 2.0
В	$4.5 \pm 0.5$	$2.0 \pm 0.3$	Less than 2.0
С	4.5 ± 0.5	$1.25 \pm 0.2$	Less than 1.25
D	$3.2\pm0.4$	$2.5 \pm 0.3$	Less than 1.5
E	$3.0\pm0.2$	1.6 ± 0.2	Less than 1.25
F	$2.0 \pm 0.3$	$1.25 \pm 0.2$	Less than 1.25
G	$1.6 \pm 0.2$	$0.8 \pm 0.2$	Less than 1.0
Н	$1.0 \pm 0.05$	$0.5 \pm 0.05$	0.5 ± 0.05

#### **RESISTORS**

#### · Chip resistor (Carbon)

#### Dimension

#### · Carbon resistor (Nomal type)

(EX)				_	0 0 0	-
	1	 .1	4	כי	6	/

1 = Type 5 = Rating wattage

2 = Shape 6 = Value 3 = Dimension 7 = Tolerance

4 = Temp. coefficient

#### **Dimension (Chip resistor)**

p	,		
Dimension code	L	W	Т
Е	$3.2 \pm 0.2$	1.6 ± 0.2	1.0
F	$2.0\pm0.3$	1.25±0.2	1.0
G	1.6 ± 0.2	$0.8 \pm 0.2$	0.5 ± 0.1
Н	1.0 ± 0.05	$0.5 \pm 0.05$	$0.35 \pm 0.05$

#### Rating wattage

_					
Code	Wattage	Code	Wattage	Code	Wattage
1J	1/16W	2C	1/6W	ЗА	1W
2A	1/10W	2E	1/4W	3D	2W
2B	1/8W	2H	1/2W

### **PACKING**

### **ADJUSTMENT**

#### **Test Equipment Required for Alignment**

	Test Equipment		Major Specifications
1.	Standard Signal Generator	Frequency Range	450 to 490MHz (K, M)
	(SSG)	Modulation	Frequency modulation and external modulation.
		Output	-127dBm/0.1µV to greater than -47dBm/1mV
2.	Power Meter	Input Impedance	50Ω.
		Operation Frequency	450 to 490MHz (K, M)
			or more.
		Measurement Range	Vicinity of 10W
3.	Deviation Meter	Frequency Range	450 to 490MHz (K, M)
4.	Digital Volt Meter	Measuring Range	10mV to 10V DC
	(DVM)	Input Impedance	High input impedance for minimum circuit loading.
5.	Oscilloscope		DC through 30MHz.
6.	High Sensitivity	Frequency Range	10Hz to 1000MHz.
	Frequency Counter	Frequency Stability	0.2ppm or less.
7.	Ammeter		5A.
8.	AF Volt Meter	Frequency Range	50Hz to 10kHz.
	(AF VTVM)	Voltage Range	1mV to 10V.
9.	Audio Generator (AG)	Frequency Range	50Hz to 5kHz or more.
		Output	0 to 1V.
10.	Distortion Meter	Capability	3% or less at 1kHz.
		Input Level	50mV to 10Vrms.
11.	Spectrum Analyzer	Measuring Range	DC to 1GHz or more
12.	Tracking Generator	Center frequency	50kHz to 600MHz
		Output Voltage	100mV or more
13.	8Ω Dummy Load		Approx. 8Ω, 3W.
14.	Regulated Power Supply		5V to 10V, approx. 3A
			Useful if ammeter equipped.

# ■ The following parts are required for adjustment

#### 1. Antenna connector adapter

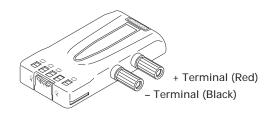

The antenna connector of this radio uses an SMA terminal. Use an antenna connector adapter [SMA(f) – BNC(f) or SMA(f) – N(f)] for adjustment. (The adapter is not provided as an option, so buy a commercially-available one.)

#### 2. Repair Jig (Chassis)

Use jig (part No.: A10-4082-03) for repairing the TK-3160. Place the TX-RX unit on the jig and fit it with screws.

The jig facilitates the voltage check and protects the final amplifier FET when the voltage on the flow side of the TX-RX unit is checked during repairs.

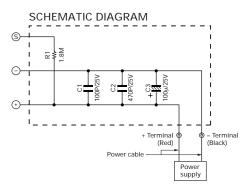

#### 3. Battery Jig (W05-0909-00)

Connect the power cable properly between the battery jig installed in the transceiver and the power supply, and be sure output voltage and the power supply polarity prior to switching the power supply ON, otherwise over voltage and reverse connection may damage the transceiver, or the power supply or both.

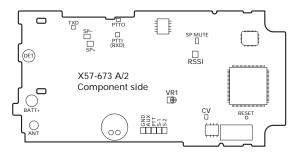

When using the battery jig in user mode, the transceiver assumes that a lithium-ion battery pack is attached to the transceiver. In adjustment mode, battery type detection is not performed. Refer to page 10 for details.

**Note:** When using the battery jig, you must measure the voltage at the terminals of the battery jig. Otherwise, a slight voltage drop may occur within the power cable, between the power supply and the battery jig, especially while the transceiver transmits.

### **ADJUSTMENT**

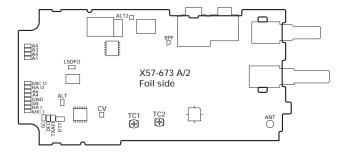

### Adjustment points TX-RX unit (X57-673) Component side view

VR1 : Frequency adjustment

RSSI: Band-pass wave form test point

#### Foil Side View

TC1 : Transmit lock voltage adjustment TC2 : Receive lock voltage adjustment CV : Lock voltage adjustment terminal.

Fig. 1 Adjustment points

#### ■ Frequency and signalling

The set has been adjusted for the frequencies shown in the following table. When required. re-adjust them following the adjustment procedure to obtain the frequencies you want in actual operation.

#### Frequency (MHz) K, M type

Channel No.	RX Frequency	TX Frequency
1	470.05000	470.10000
2	450.05000	450.10000
3	489.95000	489.90000
4	470.00000	470.00000
5	470.20000	470.20000
6	470.40000	470.40000
7~16		

#### Signalling

Signalling No.	RX	TX			
1	None	None			
2	None	100Hz Square Wave			
3	QT 67.0Hz	QT 67.0Hz			
4	QT 151.4Hz	QT 151.4Hz			
5	QT 210.7Hz	QT 210.7Hz			
6	QT 254.1Hz	QT 254.1Hz			
7	DQT D023N	DQT D023N			
8	DQT D754I	DQT D754I			
9	DTMF 159D	DTMF 159D			
10	None	DTMF tone 9			
	2 Tone:	2 Tone:			
11	A:321.7Hz	A:321.7Hz			
	B:928.1Hz	B:928.1Hz			
12	None	Single Tone:1000Hz			
13	None	MSK			
14	MSK Code	MSK Code			

#### · Preparations for tuning the transceiver

Before attempting to tune the transceiver, connect the unit to a suitable power supply.

Whenever the transmitter is tuned, the unit must be connected to a suitable dummy load (i.e. power meter).

The speaker output connector must be terminated with a  $8\Omega$  dummy load and connected to an AC voltmeter and an audio distortion meter or a SINAD measurement meter at all times during tuning.

#### **Adjustment Frequency**
